PART I: GRAVITATION AND COSMOLOGY	1
1. P. C. VAIDYA / <b>Introduction to General Relativity</b>	3
1. From Special Theory to General Theory	3
2. Einstein's Thought Experiment	3
3. Geometry or Geometries?	4
4. Riemannian Geometry and Geodesics	5
5. Geometry and Gravitation	6
6. The Line Element	6
7. Summation Convention	8
8. Vectors and Tensors	9
9. Quotient Law	11
10. The Fundamental Tensor	12
11. Raising and Lowering the Suffixes (Indices)	13
12. Length of a Vector	14
13. Addition of Vectors at a Point	14
14. Covariant Derivative of a Contravariant Vector	15
15. Covariant Derivative of a Covariant Vector	16
16. The Christoffel Symbols	18
17. Geodesics	20
18. The Curvature Tensor	21
19. Natural Coordinates at a Point	21
20. Symmetry Properties of the Curvature Tensor	23
21. Bianchi Identities and the Ricci Tensor	24
22. The Einstein Tensor and the Field Equations of Gravitation	25
23. Matter Tensor for a Perfect Fluid	26
24. Exercises	27
2. C. V. VISHVESHWARA / <b>Introduction to Black Holes</b>	31
1. Preamble	31
2. The Schwarzschild Black Hole	31
3. Properties of the Schwarzschild Black Hole	33
4. The Kerr Black Hole	37
5. The Black Hole and the Ergosphere	38
6. The Penrose Process	40
7. Charged Black Holes	41

8. Conclusion	41
References	42
<b>3. B. R. IYER / Black-Hole Thermodynamics and Hawking Radiation</b>	<b>43</b>
<b>4. C. V. VISHVESHWARA / Introduction to Relativistic Cosmology</b>	<b>51</b>
1. Preamble	51
2. The Cosmic Spacetime	51
3. Cosmological Models	52
4. Dust Models	53
5. Radiation Models	54
6. Models with Nonzero Cosmological Constants	55
7. Observational Contacts	56
8. Conclusion	58
References	58
<b>5. J. V. NARLIKAR/Relics of the big Bang</b>	<b>59</b>
1. The Early Universe	59
2. Thermodynamics of the Early Universe	61
3. Primordial Neutrinos	65
4. The Neutron/Proton Ratio	69
5. The Synthesis of Helium and Other Nuclei	72
6. The Microwave Background	75
7. Anisotropies of the Microwave Background	78
8. Cosmology and Particle Physics	79
9. Survival of Massive Particles	81
10. Problems of the Very Early Universe	82
References	86
<b>6. A. K. RAYCHAUDHURI / An Approach to Anisotropic Cosmologies</b>	<b>89</b>
1. Motivation	89
2. Killing Vectors and Bianchi Types	93
3. Kinematics – Analysis of the Velocity Field	
4. Perfect Fluid Solutions Classified According to Kinematic Properties	99
5. Some Anisotropic Cosmological Solutions	101
6. Problems	105
<b>7. P. S. JOSHI/Topics in Spacetime Structure</b>	<b>107</b>
1. Introduction	107
2. The Manifold Model	107
3. Spacetime Diffeomorphisms	108
4. Killing Vector Fields	110

5. Boundary Attachment and Conformal Compactification for Spacetimes	113
References	117
<b>8. A. R. PRASANNA / Differential Forms and Einstein–Cartan Theory</b>	<b>119</b>
1. Basic Definitions	119
2. Algebra and Calculus of Forms	121
3. Connection and Curvature Forms	123
4. Einstein–Cartan Theory – The Gauge Theory of Gravity	126
5. Gravitation in the Presence of Fermionic Matter	129
References	132
 <b>PART II: INTRODUCTION TO PARTICLE PHYSICS AND GAUGE FIELD THEORIES</b>	 <b>133</b>
<b>9. R. P. SAXENA / Introduction to Classical and Quantum Lagrangian Field Theory</b>	<b>135</b>
1. Classical Lagrangian Field Theory	135
2. Canonical Quantization	138
3. Discrete Symmetries	142
4. Interacting Fields	145
5. Invariant Perturbation Theory	146
6. Primitive Divergences in QED	153
7. QED as a Renormalizable Theory	155
8. $V$ - $A$ as a Nonrenormalizable Theory	156
9. Dimensional Regularization	157
Further Reading	162
 <b>10. J. PASUPATHY / Introduction to Particle Physics, Symmetries and Conservation Laws</b>	 <b>163</b>
1. Introduction	163
2. Charge Independence of Nuclear Forces – Isotopic Spin	166
3. Strange Particles	169
4. Nucleon Number Conservation	170
5. Lepton Number Conservation	171
6. Discrete Symmetries	172
7. $\gamma_5$ -Invariance and Weak Interactions	178
8. Strong Interactions: Quarks and Gluons	179
9. Need for Colour	180
10. Gauge Invariance	181
Further Reading	184

11. G. RAJASEKARAN / Building up the Standard Gauge Model of High-Energy Physics	185
1. Introduction	185
2. U(1) Gauge Theory	185
3. Spontaneous Breakdown of Symmetry – Goldstone Model	187
4. Higgs Model	190
5. SU(2) Gauge Theory	191
6. Spontaneous Breakdown of SU(2) Symmetry	193
7. One More Model	194
8. General Case of Non-Abelian Symmetry Breakdown	195
9. SU(2) $\times$ U(1) Model	196
10. ‘Standard Model’ before Gauge Theory	199
11. Current Algebra and SU(2) $\times$ U(1) Charges of the Fermions	201
12. The Electroweak Gauge Theory	203
13. Consequences of the Electroweak Theory	206
14. Renormalizability	210
15. Spontaneous Symmetry Breaking and Phase Transitions	213
16. Deep Inelastic Scattering, Asymptotic Freedom and Colour SU(3)	214
17. The Renormalization Group Equation	218
18. Formal Derivation of the Renormalization Group Equation	220
19. Solution of the Renormalization Group Equation	221
20. Hydrodynamic Analogy	222
21. Fixed Points and Asymptotic Freedom	223
22. Asymptotic Freedom of QCD	225
23. Infrared Problem and Colour Confinement	228
24. Tests of QCD	230
25. The Standard Model of High Energy Physics	231
26. Beyond the Standard Model	234
References	236
12. K. C. WALI / Introduction to Grand Unification Theories	237
1. Grand Unification – A Survey of Basic Ideas	237
2. Grand Unified Theory Based on $G = \text{SU}(5)$	247
3. Spontaneous Symmetry Breaking	260
4. Predictions of Minimal SU(5)	267
5. Baryon Asymmetry	274
6. Phase Transitions in the Early Universe	277
Bibliography	280
13. B. R. SITARAM / Topology and Homotopy	281
1. What is Topology?	281
2. Why the Recent Interest in Topology?	282
3. Homotopy Theory	282

4. Chern Classes	285
References	286
14. N. MUKUNDA / <b>Introduction to Compact Simple Lie Groups</b>	287
<b>PART III: QUANTUM EFFECTS IN THE EARLY UNIVERSE AND APPROACHES TO THE UNIFICATION OF FUNDAMENTAL FORCES</b>	
	293
15. B. R. IYER / <b>Quantum Field Theory in Curved Spacetime: Canonical Quantization</b>	297
1. Quantum Field Theory in Curved Spacetime	297
2. Canonical Quantization of the Scalar Field in CST	300
3. The Conformal Vacuum	305
4. A Toy Model with Particle Creation	308
5. The Adiabatic Vacuum	312
References	314
16. D. LOHIYA / <b>Zeta Function Regularisation and Effective Action in Curved Spacetime</b>	315
1. The Riemann Zeta Function	315
2. Applications	318
3. Path Integral Formulation for QFT in CST	321
4. Conformal Anomalies	333
5. Phase Transition in a De Sitter Universe	336
References	341
17. N. PANCHAPAKESAN / <b>Inflationary Cosmology and Quantum Effects in the Early Universe</b>	343
1. Quantum Field Theory in Curved Spacetime: A Short History	344
2. Problems in Standard Cosmology	345
3. Inflation	348
4. Free Lunch	349
5. The 'New' Model	350
6. Evolution of the Scalar Field	351
7. Linde's Chaotic Inflation	354
8. Hawking's Limits on Inflationary Models	355
9. Quantum Effects in the Early Universe	360
10. The Fundamental Problem	360
11. De Witt-Schwinger Expansion of Green's Function	361
12. Renormalization	365
13. Other Methods	368
14. Example of Back Reaction	368
15. Applications	370
References	371

18.	<b>T. PADMANABHAN/Quantum Cosmology – The Story So Far</b>	373
	1. Introduction	373
	2. Minisuperspace of Conformal Degree of Freedom	375
	3. Quantized FRW Universes	384
	4. Applications of Quantum Gravity	390
	5. Critique, Comparison and Open Questions	397
	Appendix 1: Schrödinger Approach to Field Theory	400
	Appendix 2: The Wheeler–De Witt Equation	401
	Notes and References	403
19.	<b>A. MAHESHWARI/The Photon, the Graviton and the Gravitino</b>	405
	1. The Photon	407
	2. The Graviton	410
	3. The Gravitino	411
	4. The Rarita–Schwinger Lagrangian	
20.	<b>A. MAHESHWARI/The Vierbein, Vielbeins and Spinors in Higher Dimensions</b>	415
	1. The Vierbein	415
	2. Vielbeins	420
	3. Spinors in $d$ -dimensions	420
21.	<b>A. MAHESHWARI/Kaluza–Klein Theories</b>	423
	1. Kaluza–Klein Theories	423
	2. Spontaneous Compactification and Isometry Groups	433
	3. Harmonic Expansions, Chiral Fermions and All That	440
	References	447
22.	<b>J. SAMUEL/Kaluza–Klein Cosmology</b>	449
	1. Introduction	449
	2. Five-Dimensional Kaluza–Klein Theory	450
	3. Remarks	453
	4. Dimensional Reduction	454
	5. Cosmology	456
	References	465
23.	<b>N. MUKUNDA/An Elementary Introduction to the Gauge Theory Approach to Gravity</b>	467
	1. Introduction	467
	2. The Yang–Mills Construction	468
	3. Gauging a Special Relativistic Matter Lagrangian	472
	4. Kinematics of the Gravitational Variables	474
	5. The Gravitational Action	477

6. Translational Gauge Potentials	478
References	479
<b>24. B. R. SITARAM / Graded Lie Algebras</b>	<b>481</b>
1. Introduction	481
2. Examples of Graded Lie Algebras (GLAs)	482
3. Maps of GLAs	483
4. Classification of GLAs	485
References	485
<b>25. R. K. KAUL / Supersymmetry and Supergravity</b>	<b>487</b>
1. Introduction	487
2. Coleman–Mandula Theorem and Supersymmetry Algebra	489
3. Representation of the Supersymmetry Algebra on One-Particle States	492
4. Representations of the Supersymmetry Algebra on Fields and Invariant Lagrangians	496
5. Spontaneous Breakdown of Supersymmetry	502
6. Pure $N = 1$ Supergravity in Four Dimensions	508
7. $N = 1, D = 11$ Supergravity	512
8. $N = 1, D = 10$ Supergravity	514
9. Concluding Remarks	520
References	521
<b>26. H. S. SHARATCHANDRA / An Overview of Superstring Theory</b>	<b>523</b>
1. Introduction	523
2. Duality	524
3. The Veneziano Formula	526
4. Free Relativistic String	526
5. Orthonormal Gauge	527
6. Quantization	528
7. Light Cone Quantization	528
8. Hamiltonian Formalism	530
9. Quantization	531
10. Lorentz Covariance	531
11. Spectrum	532
12. Closed Strings	533
13. Interacting Strings	533
14. Field Theory Limit	534
15. Superstrings	535
16. Problems and Prospects	537

# Gravitation, Gauge Theories and the Early Universe

*Edited by*

B. R. IYER, N. MUKUNDA and C. V. VISHVESHWARA

*Raman Research Institute, Bangalore, India*

This volume contains twenty-six chapters, each written by a leading expert, on various aspects of gravitation, gauge theory and the early universe. The work begins with an introduction to relativity, particle physics, and classical quantum field theory. This is followed by reviews of the latest developments in each of these fields, such as black-hole thermodynamics, electroweak theory, grand unification, and the renormalization group. The concluding part of the work comprises discussions of current research topics, such as problems of big-bang cosmology, quantum fields in curved spacetimes, quantum cosmology, Kaluza – Klein theories, supersymmetry, supergravity and superstrings. In addition, special articles on relevant mathematical topics are included.

The book covers a wide range of topics which are at the forefront of current research interests, and may serve to inspire and guide the student in these different areas, starting from first principles and leading up to the most modern developments.
